RE: Follow-Up Activities to the Feasibility Study  
Standard Chlorine of Delaware, Inc. Superfund Site  
Delaware City, New Castle County, Delaware

Dear Mr. Johnston:

This letter is to confirm follow-up activities agreed to in our meeting of May 10, 1993, regarding the Feasibility Study for the Standard Chlorine Superfund site. During that meeting and in follow-up conversations Standard Chlorine agreed to:

1. Provide information supporting the statement that remediation activities such as excavation of soils around the railroad tracks at the site would be cost-prohibitive. All participants agreed that, if necessary, any proprietary data could be kept confidential, provided that the appropriate documents were labelled appropriately.
2. Provide a copy of the agreement with Occidental Chemical regarding the use of the property north of the Standard Chlorine plant to the Department.
3. Perform the calculations requested by EPA in order to determine the probable presence of Dense Non Aqueous Phase Liquids (DNAPLs) at the site. We have discussed how to perform these calculations in the past. Please note that the method Weston used in preliminary work is not the approach EPA prefers. If you or Weston have questions about the specifics of the method to use for these calculations, please contact Kate Lose at EPA at (215) 597-0910.

As we have discussed these activities since the time of our meeting, please provide the information discussed above to the Department by July 9, 1993. If you have any questions, please contact me at 323-4540.

Sincerely,

Anne V. Hiller  
Environmental Scientist III  
Superfund Branch
